Engagement design is where we work to understand the details of your needs, capabilities, and resources. FedTech has worked with 100's of deep tech start-ups, developing an innovation and commercialization framework that includes business maturity improvement. Once we understand your current business function's posture and your desires for improvement, we build a plan to get you to where you want to be.

Execution is all about rolling up our sleeves and getting to work. We supply resources ranging from templates, to on-line tools and information repositories, to detailed assessments, to reaching out to our network, to figuring out something new. We are committed to figuring out a way to improve your business.

Our reporting architecture is the Swiss Army knife of the engagement. It shows how we evaluated your maturity both at the beginning and at the end of the engagement. The reporting includes the goals we set out to attain and the lessons you learned along the way. It even does your required reporting for you.
